# Farm Income

SITUATION

BUREAU OF AGRICULTURAL ECONOMICS  
UNITED STATES DEPARTMENT OF AGRICULTURE

FIS - 61

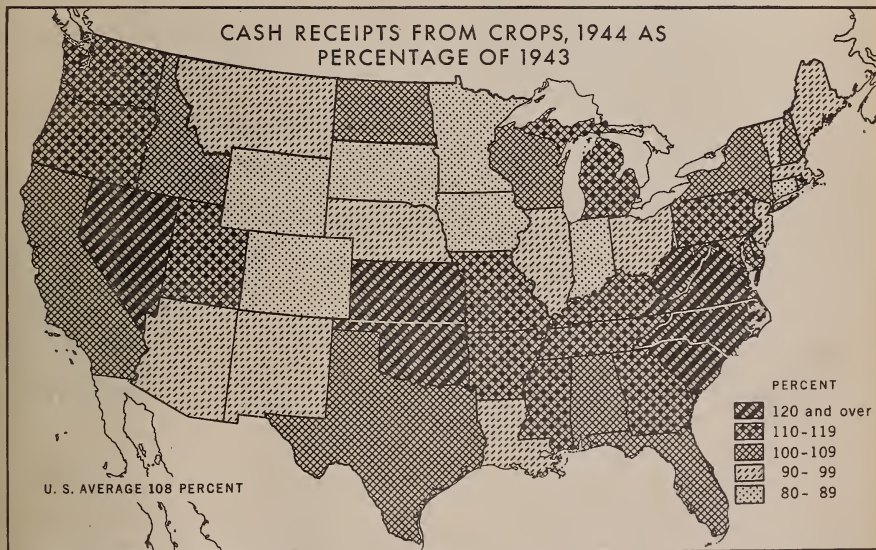

FEBRUARY 1945

In this issue:

REVISED CASH RECEIPTS FROM MARKETINGS  
OF CROPS FARM INCOME ESTIMATES:  
PUBLICATION PROGRAM FOR 1945.

CASH RECEIPTS FROM CROPS, 1944 AS  
PERCENTAGE OF 1943

U. S. DEPARTMENT OF AGRICULTURE

NEG. 43523 BUREAU OF AGRICULTURAL ECONOMICS

Highest percentage gains in cash receipts in 1944 were generally registered in those States which derived a large proportion of their receipts from winter wheat, tobacco, cotton, apples, peaches, or some combination of these crops. The increases were due largely to increased yields and slightly higher prices.

THE FARM INCOME SITUATION  
-----

Preliminary Estimates for January and February

Current estimates place total cash receipts from farm marketings for February at 1,285 million dollars, 17 percent below January and 4 percent below February 1944. Income from crops dropped 20 percent, compared with January. Severe storms, especially in the northeastern part of the country combined with car shortages, seriously interfered with movement of commodities to market, especially during the first two weeks of February.

Sales of corn in large sections of Minnesota, South Dakota, and Nebraska have been retarded because of an unusually high moisture content and inadequate drying facilities.

The decline of 45 percent in cash receipts from cotton and cottonseed was slightly less than usual, but the drop of 42 percent in income from tobacco was little more than half as great as the decline that has generally taken place between January and February in recent years. Burley tobacco began moving onto the markets in February, which was unusually early, in rather large volume. Many of the cigar types were recently released for sale because freeze orders, which prevented marketing earlier in the season were lifted.

Cash receipts for fruits and nuts in February were estimated to be the same as in January, rather than taking the usual slight drop. Marketings of both citrus and deciduous fruits were about the same as January, with declines in sales of eastern apples offset by greater marketings of western fruit. Prices of citrus fruit recovered quickly from the seasonal decline in late January, and prices for all fruit showed little change.

The decline in cash receipts from livestock and livestock products in February was greater than occurred in either 1943 or 1944. Federal slaughter of all types of meat animals dropped rather sharply with hogs showing a decrease of about one-third and sheep and lambs about 18 per cent. Although prices increased slightly, the decline in income from meat animals was greater than usual.

Cash receipts from dairy products in February dropped slightly as prices declined. Usually, the seasonal increase in production more than offsets the drop in prices and the difference in the length of the months.

About the usual seasonal increase in income from poultry and eggs occurred. A sharp rise in egg production took place, but marketings of poultry decreased. Prices of eggs dropped, but not enough to offset the increase in production. Poultry prices remained about the same.

Total cash receipts from farm marketings for January are now estimated at 1,554 million dollars compared with the tentative estimate of 1,560 million dollars shown last month. While the estimates for cash receipts from crops and for livestock and livestock products did not change significantly, estimates for some of the individual items showed considerable change. Receipts from cotton and cottonseed are now placed at 110 million dollars, instead of 125 million dollars. The estimate for tobacco has been raised from 130 million dollars to 151 million dollars, on the basis of better information on the effect of lifting the freeze order on purchase of cigar types. The decline caused by dropping the estimate for cash receipts from poultry and eggs from 177 million dollars to 163 million dollars was nearly offset by the increase which occurred by raising the estimate for meat animals from 488 million dollars to 498 million dollars.

Income from most crop groups in 1944 was well above 1943. Tobacco led the way with an increase of 33 percent. Food grains gained 26 percent and fruits and nuts showed a gain of 23 percent. Sugar crops increased 15 percent and cotton followed with an increase of 13 percent.

Relatively large acreages harvested and high yields were dominant features in bringing about high production of most crops in 1944. The index of volume of production of crops for sale and home consumption was 10 percent greater in 1944 than in 1943.

1/ These revised estimates are shown in table 4. They do not agree with the estimates for crops in table 3 where the figures shown for 1944 are the sum of the current monthly estimates, and the figures for 1943 are the estimates published in The Farm Income Situation, February 1944.

The volume of crops marketed during 1944, which included part of the 1943 crops carried over and sold in the first half of 1944, was 4 percent above 1943.

Physical Volume of Crop Marketings  
1935-39 = 100

| March .....     | 85   | 83   | 98                               |
| April .....     | 71   | 74   | 104                              |
| May .....       | 75   | 80   | 107                              |
| June .....      | 66   | 80   | 121                              |
| July .....      | 114  | 114  | 100                              |
| August .....    | 161  | 131  | 81                               |
| September ..... | 181  | 180  | 99                               |
| October .....   | 217  | 238  | 110                              |
| November .....  | 138  | 178  | 129                              |
| December .....  | 126  | 131  | 104                              |
| Annual .....    | 119  | 124  | 104                              |

No change over 1943 occurred in July, but there were slight reductions in March and September and a greater decline in August. Increases were shown in other months ranging from 4 percent in January, February, April, and December to 29 percent in November. Slightly higher prices for most crops, particularly during the early part of the year, contributed to higher income from crops each month in 1944 except August, compared with the same month in 1943.

Cash Receipts for Most of the Principal Crops made  
Sharp Gains in 1944 over 1943

The largest acreage of wheat since 1938, combined with an average yield of over 18 bushels per acre, resulted in a crop in 1944 of more than a billion bushels, the largest wheat crop ever produced in the United States. Although seeding of winter wheat was retarded in most sections by dry weather in the fall of 1943, ample rain in the late fall and spring helped to bring about heavy crops in most States. Acreage of spring wheat was far above average, but excessive rain during the harvesting season interfered with combining and threshing, and resulted in considerable loss. Average wheat prices for the year were 12 percent above 1943, and cash receipts from wheat in 1944 were 34 percent greater.

Corn also produced a record crop of over 3 billion bushels. While acreage harvested was high as compared with recent years it was smaller than in any year from 1909 to 1933. Average yields per acre, however, were the highest of all time, except for the 1942 crop. Heavy rains and floods delayed planting in a large part of the Corn Belt, but late plantings escaped the worst of the severe dry weather in some southern sections. Extensive midsummer droughts were offset by late rains and favorable weather in the early fall. Marketing of the 1944 crop was retarded in some sections on the western side of the Corn Belt because of lack of facilities to dry properly a large percentage of the corn which had a relatively high moisture content and also because of a shortage of cars for transportation to market.

Average prices for corn in 1944 were 10 percent above 1943. Starting with a gain of 28 percent over 1943 in January, the average monthly prices gradually approached the levels of the year before until they were about the same in November and 5 percent lower in December. Cash receipts from corn for the entire year 1944 were 4 percent greater than in 1943.

Generally favorable weather throughout the growing season was largely responsible for record yields of 295 pounds of cotton per acre. Even though acreage harvested was the smallest in 50 years, the crop of over 12 million bales was exceeded only 4 times during the past decade.

Prices for cotton in 1944 averaged 2 percent higher than in 1943. The 1943 crop marketed in the early part of 1944 was sold at prices not greatly different from prices paid for 1942 cotton in the same months of 1943. Average monthly prices for 1944 cotton were mostly 4 to 5 percent higher than prices for comparable months in 1943. Cash receipts from the sale of cotton in 1944 amounted to 1,302 million dollars, 16 percent more than in 1943.

The 1944 tobacco crop of over 1.8 billion pounds was only slightly smaller than the record crop of 1939. Acreage was increased about 12 percent above the 10 year (1933-42) average, and the average yield per acre was the highest in history. Production of tobacco used for cigarettes was the greatest on record.

Average prices for the year 1944 were 3 percent above 1943. Cash receipts from farm marketings of tobacco in 1944 were 33 percent above 1943.

The 1944 potato crop was 18 percent below the 1943 crop, but 5 percent above the 10-year (1933-42) average. The acreage harvested was 1 percent below the year before, and 4 percent below average. The yield per acre was the lowest since 1939, and in some of the early producing states yields were the lowest on record.

Potato prices for the year 1944 were 5 percent below 1943 and cash receipts were 3 percent less.

The 1944 apple crop in commercial areas was 39 percent larger than the small 1943 crop, but only 1.1 percent above the 10-year (1933-42) average. The crop ranged from 8 percent above 1943 in the South Central Region to 147 percent above in the South Atlantic Region. In general, conditions during the growing season were favorable except in sections in the Midwest and the Appalachian area, where severe drought and codling moth injury resulted in a large percentage of small-size fruit of poor quality, and in the Northeast, where there was a high percentage of drops because of unusually strong winds.

Prices for apples in 1944 averaged 20 percent above 1943. Monthly prices for the first 7 months ranged from 72 percent above the same month in 1943 in February to 3 percent above in July. During the last 5 months, prices in 1944 were below the comparable months in 1943, falling to 12 percent below in December. Cash receipts from farm marketings of apples in 1944 were 265 million dollars, 30 percent greater than in 1943.

Largest Percentage Gains in Cash Receipts from  
Crops made in Southern Sections

Although most States shared in the increased income from crops in 1944 compared with 1943, the largest part of the gain took place in the southern regions, while slight declines were shown in some of the northern sections. Cash receipts from crops in the South Atlantic Region were 22 percent above 1943 -- the largest regional increase. Gains were made in all states in the region, from 4 percent in Maryland to 38 percent in South Carolina. Slightly greater sales at higher prices resulted in an increase of 14 percent in receipts from citrus fruit in Florida. Both acreage of tobacco harvested and yields increased throughout the tobacco area. Production increased generally, a gain of 35 percent over 1943 being shown for North Carolina, the largest producer of tobacco of any state in the U. S., Income from tobacco in the South Atlantic Region rose 46 percent above the year before. Cash receipts from cotton in this region in 1944 increased 25 percent above 1943, as higher yields more than offset the 11 percent decrease in acreage harvested. Total production increased 10 percent.

In the South Central Region cash receipts from crops in 1944 were 13 percent above 1943. While income in Louisiana declined 5 percent, Oklahoma gained 63 percent, and a substantial increase was made in most states in the region. Cash receipts from wheat increased 134 percent in this region, as production of winter wheat more than doubled in the area, with Oklahoma showing a gain of 171 percent. Income from cotton in the South Central Region in 1944 increased 12 percent over 1943. Acreage harvested dropped, but yields increased sharply in most states, resulting in a 7 percent gain in total production. Cash receipts from tobacco rose 21 percent in 1944 as acreage harvested gained 17 percent and production increased by nearly one-quarter.

FARM INCOME ESTIMATES: PUBLICATION PROGRAM FOR 1945

Income estimates published in The Farm Income Situation include the following: monthly and annual estimates of cash receipts from farm marketings of crops and livestock for States and, by more detailed commodity groups, for the United States; monthly estimates of Government payments to farmers for the United States, and semi-annual estimates for States; annual estimates of the value of home consumption for States and, by commodity groups, for the United States; annual estimates of gross farm income, production expenses, and realized net income of farm operators, for the United States; annual estimates of the net income of all persons living on farms compared with the income of the nonfarm population. 1/ Cash receipts from farm marketings

1/ Income estimates for persons on and off farms summarized from annual Net Farm Income and Parity Report, Bureau of Agricultural Economics, issued in July of each year.

represent the quantities of crops and livestock sold by farmers multiplied by the prices they get at their local markets. Realized net income is the net return to farm operators over and above production expenses.

A controlling factor in the preparation and release of the farm income estimates is the availability of the basic data on production, marketings, and prices. The income estimates are prepared promptly, as the basic statistics become available, so as to be as timely and useful as possible. Revisions in various income series are made in order to incorporate the most recent production, marketings and price data.

The Farm Income Situation regularly presents estimates for the United States of cash receipts from farm marketings and Government payments for the current month, revisions of the corresponding estimates for one and sometimes two preceding months, and State estimates of cash receipts from farm marketings for the second month previous. Monthly index numbers of cash receipts for the 4 preceding months and of the physical volume of farm marketings for crops and for livestock groups for past months of the current year are also presented in each issue. Additional income and volume of production estimates are scheduled for release in The Farm Income Situation in 1945 as follows:

#### February

Revised annual estimates of (1) total cash receipts from crops, by States, cash receipts from selected crops and groups of crops, by States, and cash receipts from a detailed list of crops for the United States, 1942-44; (2) Government payments to farmers by States, 1944.

#### April

Revised annual estimates of (1) cash receipts from livestock and livestock products, by commodity groups, for States, 1943 and 1944; (2) total cash receipts from farm marketings and Government payments (incorporating these and the February crop revisions), for States, 1943 and 1944.

#### June

Estimates of annual cash receipts plus the value of home consumption, by States, and, for a detailed list of crops and livestock, for the United States, 1944, with revisions for 1942 and 1943.

#### July

(1) Estimates of gross farm income (the sum of cash receipts from farm marketings, Government payments, value of home consumption, and rental value of farm homes), production expenses, and realized net income of farm operators (gross farm income minus production expenses) for the United States, 1944 and other recent years; 1/ (2) estimates of the net income of persons on farms (farm operators and farm laborers) compared with the income of the nonfarm

1/ Summarized from annual Net Farm Income and Parity Report, Bureau of Agricultural Economics, issued in July of each year.

population, and of total agricultural income (to persons living on and off farms) compared with nonagricultural income, for the United States, 1944 and other recent years; 1/ (3) preliminary forecast of cash receipts, gross farm income, production expenses, and realized net income of farm operators, for the United States, 1945.

August and December

(1) Annual indexes of volume of production for sale and home consumption, by crop and livestock groups, for the United States, 1945 compared with earlier years; (2) Government payments, by States, January through June, 1944 and 1945 (August issue).

September or October

Outlook for cash receipts, gross income, production expenses, and realized net income of farm operators, 1946 compared with estimates for 1945.

- - - - -

Estimates of cash receipts from farm marketings are derived for each major crop and livestock group on the basis of the estimated total production for the year, the amount sold during the year, the proportion sold or placed under loan each month, and monthly prices. Data on production, marketing, and prices are obtained from inquiries sent to farmers by the Bureau of Agricultural Economics, current series on carlot receipts at terminal markets, reports of packers in principal livestock markets, and from numerous special sources for individual crops and livestock categories. 2/

1/ Summarized from annual Net Farm Income and Parity Report, Bureau of Agricultural Economics, issued in July of each year.

2/ A discussion of sources and methods of estimating monthly cash receipts from farm marketings is presented in United States Estimates of Monthly Cash Farm Income and Index Numbers of Income, January 1935 to September 1942, Bureau of Agricultural Economics, December 1942. Revisions in methodology for some commodities have been made since that time.

The figures on cash receipts for the current month, marked "tentative" in The Farm Income Situation, are subject to considerable error because only very preliminary estimates of prices and quantities of commodities sold in the current month are available when the cash receipts are estimated. More complete basic data are not received until the end of the month or early in the following month. The "tentative" estimates are not worked up in as much detail by States as most of the other series on cash receipts. In arriving at the "tentative" estimates for some commodities, usual seasonal changes in prices and quantities sold are relied upon to indicate the change in cash receipts between the preceding and current month. Adjustments are made to allow for unusual changes insofar as they can be identified.

During the following month, the estimates are reworked by the use of data on prices, by States, collected for the preceding month, and revised estimates of production and disposition. These monthly estimates of cash receipts are marked "preliminary" because the series on meat animals and dairy products are subject to further revision a month later when State data on receipts of different types of meat animals at primary markets, and on creamery butter production, become available for the second month previous. The monthly estimates incorporating the latest basic data for livestock are marked "revised".

State estimates are presented for the second month preceding the date of The Farm Income Situation, largely because of the time lag in the basic State data for livestock.

Annual estimates of cash receipts, published in the February and April Situation, are computed for each major crop and livestock group, by States, on the basis of more complete and reliable production, disposition, and price data than are available for the monthly estimates. 1/

1/ A description of the methods used in obtaining annual estimates of cash receipts for major commodities is presented in Income Parity for Agriculture, Part I, Farm Income, Sections 1-18, Bureau of Agricultural Economics.

Table 2. - Cash receipts from farm marketings, by States,  
December 1943 - 44.

| STATE                        | CROPS    |         | LIVESTOCK AND LIVESTOCK<br>PRODUCTS |         | TOTAL     |           |
|------------------------------|----------|---------|-------------------------------------|---------|-----------|-----------|

<sup>1</sup>Preliminary. Estimates for 1943 are the series published in the April 1944 Farm Income Situation. Estimates for 1944 are sums of the monthly estimates published currently in the Farm Income Situation. For revised estimates for crops, see table 4. Revised estimates for livestock and livestock products and total cash receipts will be published in April.

## STATE AND REGIONAL ESTIMATES

North Atlantic Region

The 4 percent increase over December 1943 in cash receipts from crops in the North Atlantic Region during December 1944 was due mostly to the large gain in sales of apples, especially in Massachusetts, New York and Pennsylvania. Receipts were also high from potatoes and truck crops. Income from eggs showed gains in all States except New York, and led the way to an increase of 9 percent in receipts from livestock and livestock products for the region.

The increase in the apple crop in the North Atlantic Region was largely responsible for the gain of 4 percent in receipts from crops in the year 1944 over 1943.

East North Central Region

Soybeans figured prominently in raising cash receipts from crops in the East North Central Region during December 5 percent above the same month in 1943, while decreases in marketings of hogs and poultry paved the way for the 2 percent drop in receipts from livestock and livestock products:

Cash receipts from crops dropped 1 percent in the East North Central Region in 1944 compared with 1943, as income from soybeans and vegetables decreased, while receipts from wheat and fruit rose sharply.

West North Central Region

Increases in cash receipts from soybeans in Iowa, grain sorghums in Kansas, and wheat in North Dakota, South Dakota and Kansas more than offset the rather severe reduction in income from corn in parts of South Dakota and Nebraska. This reduction was caused by scarcity of cars for shipping, together with a large quantity of corn of unusually high moisture content which could not be marketed without conditioning. Cash receipts from crops in the West North Central Region during December were 4 percent greater than in 1943. Income from livestock and livestock products in December, however, dropped 11 percent below the same month in 1943, as cash receipts from hog marketings decreased nearly one-fifth as a result of the relatively small number of pigs farrowed last Spring.

Receipts from flaxseed, soybeans, and truck crops dropped sharply in the West North Central Region in 1944 and although income from wheat, cotton and potatoes made significant gains, cash receipts from crops declined 2 percent below 1943.

South Atlantic Region

In the South Atlantic Region receipts from crops in December rose 31 percent above 1943, as income from tobacco nearly doubled in Virginia and North Carolina. Receipts from fruits also increased greatly in

# CASH INCOME FROM FARM MARKETINGS, BY REGIONS, 1943-44 COMPARED WITH 1938-42 AVERAGE

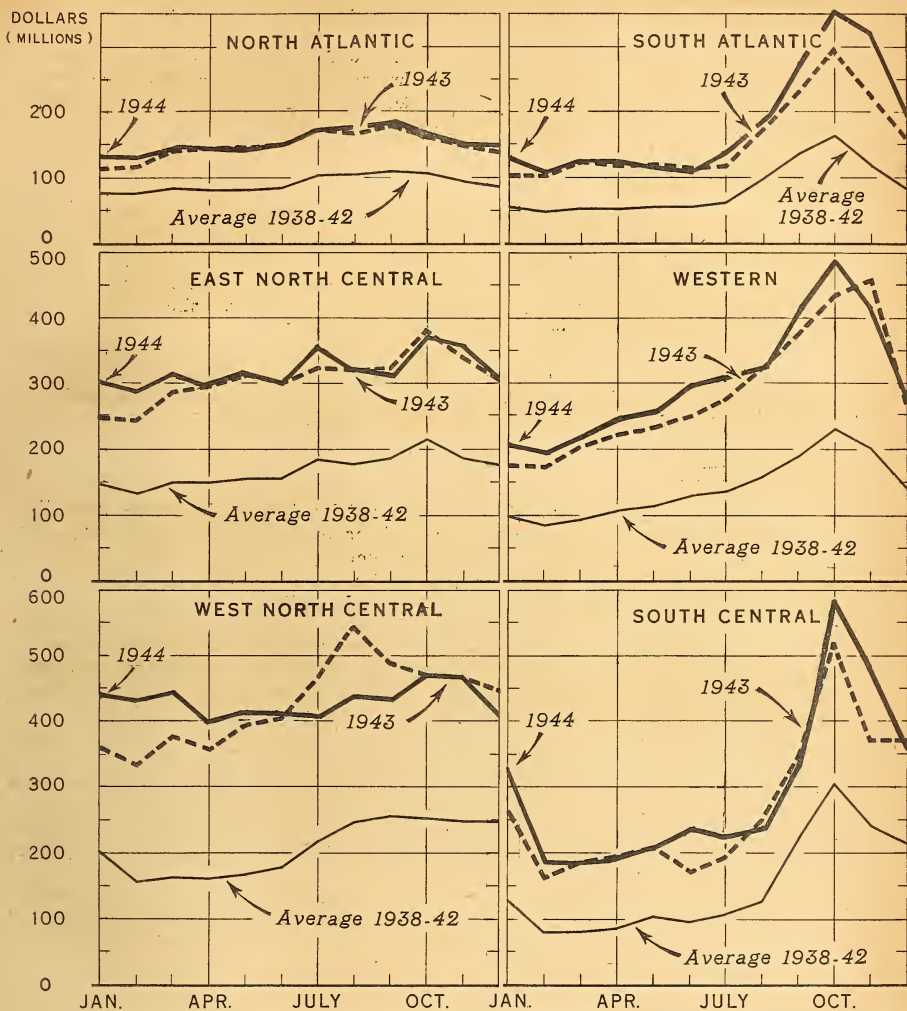

FIGURE I

Virginia, North Carolina and Georgia. No change was shown in income from livestock and livestock products in December, compared with a year earlier, as increases in receipts from meat animals, eggs and dairy products were great enough to offset reductions in income from poultry.

Cash receipts from crops in the full year 1944 rose 22 percent above 1943. Income from citrus fruits in Florida was 14 percent greater than during the previous year. Receipts from wheat, corn, cotton, tobacco and apples increased sharply for the entire region.

#### South Central Region

Cash receipts from crops in the South Central Region during December dropped 2 percent below 1943. Severe declines in income from truck crops were shown in Tennessee and Texas, and receipts from cotton decreased in most States. Income from livestock and livestock products in December also decreased 2 percent compared with the same month in 1943, as cash receipts from hogs dropped in all States.

Income from wheat, cotton, tobacco and fruits and nuts rose sharply resulting in a gain for the full year 1944 of 13 percent over 1943 in receipts from crops in the South Central Region.

#### Western Region

Income from truck crops in California and from apples in Washington rose sharply and cash receipts from crops for the Western Region in December increased 9 percent over December 1943, but income from meat animals dropped rather abruptly to bring about a decrease of 6 percent in receipts from livestock and livestock products.

Cash receipts from citrus fruits for the entire year 1944 rose 31 percent above 1943. Sharp increases in income from wheat and cotton also contributed in bringing about a gain of 6 percent in receipts from crops in the Western Region.

<sup>1</sup> These yearly estimates of receipts from farm marketings are based on revised data, and therefore do not agree with the estimates which appear in table 3.

<sup>2</sup> Subject to further revision.

<sup>3</sup> Includes Agricultural Conservation, Sugar Act, and Price Adjustment payments to farmers. Excludes 2,748 thousand dollars of conservation materials for which state figures are not available.

<sup>4</sup> Includes Agricultural Production, Conservation, Parity Sugar Act, and Dairy Production Payments to farmers. Excludes 19,811 thousand dollars in 1943 and 3,995 thousand dollars in 1944 of conservation materials for which state figures are not available.

Table 5. - Crops: Revised cash receipts from farm marketings,  
by States, 1942.
